

I'VE FINISHED INITIAL TREATMENT  
AND AM READY FOR MY FIGHT  
TO STAY CANCER FREE.

I'M READY FOR ARIMIDEX.

- ARIMIDEX is the only drug of its kind with 5 years of clinical data that proves efficacy and safety in the treatment of early breast cancer after surgery with or without radiation therapy
- ARIMIDEX comes from AstraZeneca, a pioneer in the science of breast cancer medicine for over 30 years

Ask your doctor about ARIMIDEX, the most prescribed aromatase inhibitor.<sup>1</sup>

Call 1-800-555-1234 or log on

learn more about ARIMIDEX.

#### Important Safety Information

Prescription ARIMIDEX is only for postmenopausal women. ARIMIDEX should not be taken if you are pregnant because it may harm your unborn child.

In early breast cancer clinical trials, the most common side effects seen with ARIMIDEX include hot flashes, joint symptoms, weakness, mood changes, pain, sore throat, nausea and vomiting, depression, high blood pressure, osteoporosis, swelling of arms/legs, and headache. Fractures (including fractures of the spine, hip, and wrist) occurred more frequently with ARIMIDEX than with tamoxifen (10% vs 7%). ARIMIDEX should not be taken with tamoxifen or estrogen-containing therapies.

I AM CONFIDENT.

I AM STRONG.

If you are without prescription coverage and can't afford medication, AstraZeneca may be able to help.

Please see important product information on adjacent page.
